EarthCam, the construction camera technology experts, offer an extensive line of professional camera solutions, including steaming video, HD megapixel cameras and dynamic security systems. EarthCam solutions can be used in a wide variety of scenarios, including jobsite monitoring, construction documentation, dispute resolution and project promotion.

EarthCam recently introduced the new MegapixelCam Robotic. This rugged outdoor robotic camera delivers streaming video and professional quality 288 megapixel panoramas. This unique camera seamlessly monitors complex construction projects while creating powerful, continuous project documentation. Cost benefits are instantly realized with enhanced communication, reduced travel requirements, efficient dispute resolution and automating website updates for positive public awareness.

EarthCam cameras can be installed throughout jobsites for remote project management, as well as for documentation and marketing purposes. You can also stream live and time-lapsed videos through websites and mobile devices, providing the public with an ever-evolving view of your project.

EarthCam is a software-as-a-service provider, offering complete machine-to-machine products, services and software, as well as a convenient and inclusive customer experience. EarthCam's professional managed services include engineering and consulting services, certified installations worldwide, solar and wireless solutions, website development and theatrical-quality time-lapse movies.

EarthCam camera systems meet the demands of major projects by combining the latest, most reliable hardware with smart, powerful software and superb managed services. From concept to execution, you can trust EarthCam's expert engineers to assemble, program, install and manage your network camera system. When you choose EarthCam, you get a complete, end-to-end solution, plus world-class customer service.
