

EarthCam - spying on the world online January 22, 2010

If you're curious to see how life proceeds in another city, state or even country - pay attention to service, offering a look at life with the help of webcams around the world.

Two years ago, spread through the Internet link to a video camera that works in real time. This camcorder broadcast a simple, seemingly, a thing - feeding of wild boar in the winter Estonian forest. In the video nice pigs periodically emerge from the forest, feeding and escape back. It would seem that such a simple thing - and we gained a rabid popularity. Reference to spread through the Internet and broadcast several times "rushila" server, according to eyewitnesses.

Spying on someone people love since ancient times.

Enough to remember the show "Dom-2" or its predecessor, the domestic "Behind Glass", whose members have found fame truly federal scale.

Draft [EarthCam](#) does not offer you pry the girls in the shower. It provides an opportunity to look at the periodic photos from cameras or on broadcast in real time a huge number of cameras around the world.

[EarthCam](#) cameras can be viewed as the most [EarthCam](#), and on the side of the court - a collection of links to other sites. Part of the cameras may even control the Internet, but not always clear, static camera, or is still "real-time."

Most webcams are, of course, in the United States. World is much smaller than we would like - for example, Moscow is only one camera overlooking the Moscow River.

Plyusov the site have a lot - to view does not require any mandatory registration (you can register to service remembering the links to your favorite cell), close to the camera shows its location on the map Google, the weather is indicated for the specific location. The site translated into six languages, including even the Japanese (among Russian or not). There is a search webcams in a particular city.

And that is typical among several attempts to surf the site did not find any broken webcam. As you know, them things are not much better than with the online TV - links change quite often. It's nice that the site for these watches.

[EarthCam](#) - service offering a look at the world through the lenses of web cameras (both static and real-time).
