

EarthCam Integration With Infotech Doc Express

Construction Technology & Software August 25, 2021

EarthCam has integrated with Infotech's Doc Express service to create a visual timeline from the project site, inserting data directly into daily workflow and enhancing the audit trail.

By using an EarthCam camera on a job site with Infotech's services, Infotech users are now able to view **digital job site activity** remotely in real-time to make informed decisions and have a visual historic record of progress. Images can automatically be pushed to specific contracts in Doc Express such as compliance reports. The frequency of image uploads can be set according to job site activity levels and can include metadata such as weather, project title, and date/time stamp.
